

PartsSource PRO® Visual Analytics

Actionable Insights
to Improve Decisions
& Reduce Cost

Drive Next-Level HTM Performance

Every year, U.S. hospitals overspend on supply chain expenses. At the same time, operating margins are declining, and healthcare organizations must uncover new opportunities for cost reduction and continuous improvement. With PartsSource’s Visual Analytics, healthcare leaders can access the evidence-based data needed to make strategic decisions, expand capacity, improve quality, mitigate risk and create process efficiencies.

“The enhanced PartsSource PRO Visual Analytics tool will be very valuable for us to dig in and better understand the details of our spend and identify additional cost savings for the organization. I’m excited to access the analytics online at any time and share the data with leadership to show our internal customers the savings.”
